

Bug: API allows unauthorized write operations

- **ID:** BUG-001
- **Title:** Write operations succeed without authorization
- **Affected Modules:**
 - Posts → `POST /posts` returns **201 Created** instead of 401
 - Users → `POST /users` returns **201 Created** instead of 401
 - Other endpoints (PUT, PATCH, DELETE) sometimes succeed instead of blocking unauthorized access
- **Steps to Reproduce:**
 1. Send a `POST` request to `https://jsonplaceholder.typicode.com/posts` with any payload.
 2. Send a `POST` request to `https://jsonplaceholder.typicode.com/users?name=test&username=test&email=test@test.com`.
- **Expected Result:**

The API should return **401 Unauthorized** since no authentication/authorization is provided.
- **Actual Result:**

The API returns **201 Created** and creates a fake resource.
- **Severity:** High (Security Issue – Unauthorized access).
- **Status:** Open
